AI Solutions Engineer with a software engineering background and customer-facing presales experience. I design and build AI agents and LLM applications end-to-end — including VAISS, a live multi-agent system — and currently work in technical presales at Westcon-Comstor, scoping solutions, running technical conversations, and translating technology into business value for partners. I'm AWS Certified in AI Practitioner, hold a Master of Software Engineering (AI Advanced), and am bilingual in English and Arabic. I enjoy shaping ambiguous customer problems into concrete, buildable solutions.

EXPERIENCE

Presales Specialist | Westcon-Comstor, Sydney Nov 2025 – Present

- Customer-facing technical point of contact for channel partners across networking and cybersecurity vendor portfolios discovery, solution scoping, and requirements gathering.
- Run technical conversations and product walk-throughs, and prepare technical quotations and proposals aligned to commercial targets.
- Translate complex technology into clear business value for stakeholders ranging from technical buyers to non-technical decision-makers.
- Manage multiple concurrent engagements in a fast-moving distribution environment with tight SLAs.
- Expanded into Westcon's AWS Cloud practice in mid-2026, gaining hands-on presales experience through AWS proof-of-concept builds and technical demonstrations, while developing exposure to Migration Acceleration Program (MAP) assessments and planning technical enablement sessions for partners.
- Built and shared a PDF-to-Excel tool that speeds up vendor-code entry into OneView; a few colleagues on the team use it now too.

Software Engineer | Stoneglass Industries, Sydney Feb 2022 – Aug 2025

- Owned C#/.NET and WPF CAD/CAM applications end-to-end across three years of feature development, production support, and reliability improvements for software used daily in dental manufacturing.
- Automated CNC milling and 3D print job assignment with a custom tool; cut manual processing time by roughly 60%.
- Built a TensorFlow model for 3D dental-model alignment that beat the existing ICP baseline by about 25% on the test set.
- Owned features independently from customer requirements through implementation and production release, with technical review from the Head of Engineering.
- Optimised MySQL queries and redesigned parts of the database schema to improve performance as production data and usage grew.
- Acted as the technical point of contact for end users training, support, and turning feedback into product improvements.

PROJECTS

VAISS Compliance Auditor — *Next.js, TypeScript, Anthropic Claude API, Vercel*

- Live agentic AI system that assesses an AI system against Australia's Voluntary AI Safety Standard in around 60 seconds, framed around a concrete enterprise governance problem.
- Five-stage multi-agent pipeline: a risk classifier sets the risk tier, a guardrail scorer assesses all 10 guardrails with calibrated green/amber/red ratings, and three generators run in parallel to produce an AI inventory entry, a board memo, and a 90-day remediation plan.
- Results stream to the interface in real time via SSE; designed for clarity for non-technical governance stakeholders.

CalcSolve — *Next.js, Supabase, Stripe, Claude API*

- AI SaaS that solves calculus problems with step-by-step explanations, an AI tutor, and gamified skill trees. Live on Vercel with Stripe billing.

AI Dental Assistant — *React, Firebase, OpenAI API*

- Full-stack AI assistant with multi-session chat memory, response orchestration, and PDF export; auth and data through Firebase and Firestore.

Tileverse — *Next.js, Supabase, Stripe, Vercel*

- Digital marketplace built solo end-to-end database schema, API layer, Stripe payments, and an anti-abuse system.

TradieSpark — *WordPress, Claude Code, SEO*

- A productised web agency I built and operate fixed-scope, fixed-price websites for Australian tradespeople, including client onboarding and delivery.

Also — *Independent builds*

- FindByType — quiz platform with affiliate monetisation. Q-Lex sci-fi novel with 150 AI-generated illustrations, published on Amazon. Blast Ring mobile game on Google Play.

SKILLS

AI & Agents: Agentic system design (multi-agent orchestration, tool use, planning), LLM application development (Anthropic Claude API, OpenAI API, prompt engineering, structured output), streaming interfaces (SSE), RAG fundamentals, model evaluation, TensorFlow

Customer-Facing & Delivery: Technical presales, discovery & solution scoping, technical demos, technical quotations and proposals, translating capability into business value, end-to-end ownership of delivery

Software Engineering: Full-stack development (Next.js, React, TypeScript), backend & APIs (Node.js, Supabase, REST), C#/.NET, database design (PostgreSQL, MySQL)

Cloud & Tooling: Azure (hands-on), AWS Certified AI Practitioner, Vercel, Firebase, Supabase, CI/CD (Azure DevOps, GitHub Actions), Claude Code

CERTIFICATIONS

- AWS Certified AI Practitioner
- Anthropic Academy — AI Fluency; Building with the Claude API
- AWS — Solutions Architect Associate (in progress)

EDUCATION

Master of Software Engineering (AI Advanced) Torrens University Australia	2020 – 2021
Bachelor of Computer Engineering Lebanese International University	2016 – 2019
